

Ops 1: Video Demonstration

Dean Leon | Student ID: 934513949

1. Media Link

The following link directs to the video demonstration of the Minecraft server deployment and configuration checkpoints hosted on the Oregon State University media portal.

https://media.oregonstate.edu/media/t/1_5xh1j5c9

2. Demonstration Timestamps

Key checkpoints and extra credit requirements are documented at the following intervals:

Timestamp	Description
00:04	Checkpoint 1: AWS console visible with account ID, SSH login shown, dedicated `minecraft` user existence proven (e.g., `id minecraft`).
01:24	Checkpoint 2: Instance is rebooted, then `nmap -sV -Pn -p T:25565` output shows port open and Minecraft service responding with custom MOTD containing name or student ID. Server port can differ from default.
01:36	Checkpoint 3: After reboot, `systemctl status` (or equivalent) confirms the service is active and enabled; uptime/PID is consistent with a post-reboot start.
01:50	RCON Extra Credit 3: Remote Console Demo
02:08	Checkpoint 4: Service is stopped, status confirms it is stopped, service is restarted, and health is confirmed

Used LLM to format timestamps.
